Unlike powdercoating, which is a paint that is applied to only the surface of the Metal.

When Hot Dip Galvanizing, The Molten Zinc covers your item 100% Inside & Out.

The layers of zinc inhibit rust, providing decades of protection to the underlying ironwork. Ideal for coastal areas, hot-dip galvanizing provides excellent protection from corrosion due to humid and salty sea air. If left unpainted, the finish will weather to a uniform dull gray appearance within a year.

*Additional Price**
2 Year Paint Warranty
3 Year Structure Warranty

Hot-dip galvanized, and powder-coated steel is an excellent option for pool or swimming enclosures and oceanfront properties.

Hot-dipped galvanized railings are a durable, low-maintenance option for marine and humid environments.

Powder coating on top of galvanized steel allows you to select the color of the post. If the powder coating is ever chipped, it will be protected by the hot-dip galvanized layer underneath.

Double the Protection.
